

Power BI Report (SuperStore) Screenshots

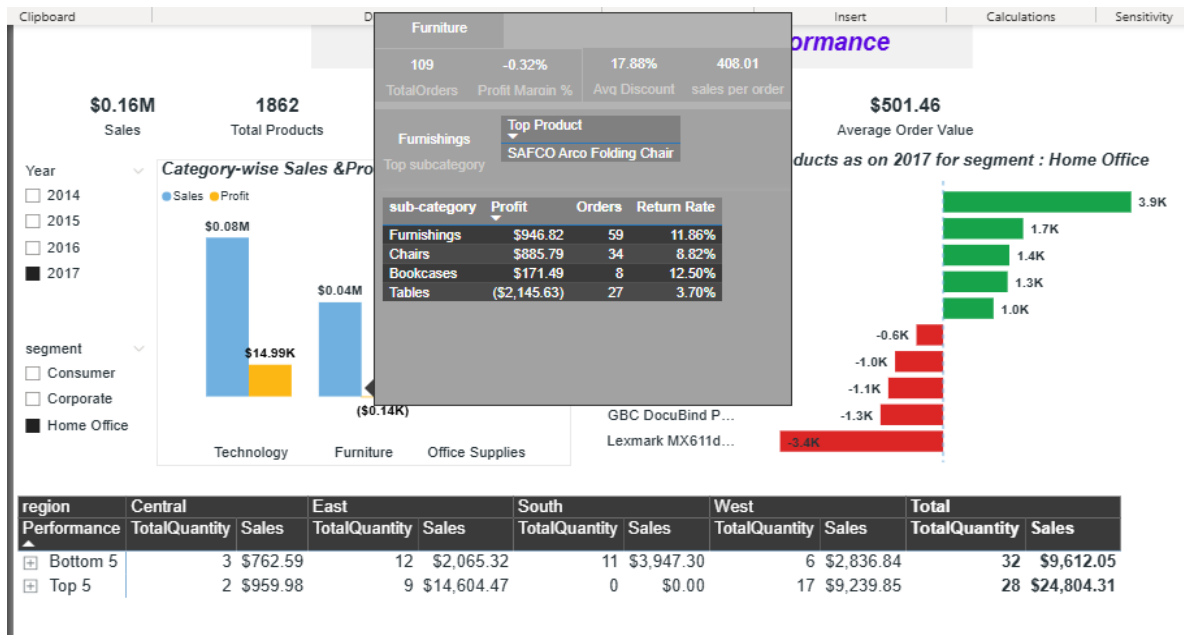

This page gives an overview of superstore's business performance focusing on metrics such as sales, customers, orders, profitability, return rate, and average order value. It is intended to help users quickly access overall performance and identify key trends across time, states, product sub categories, customer segments, and categories. Interactive filters for Year, category and Region allows users to analyse the results from different business perspective while Top 5 states visual highlights the major contributors to sales.

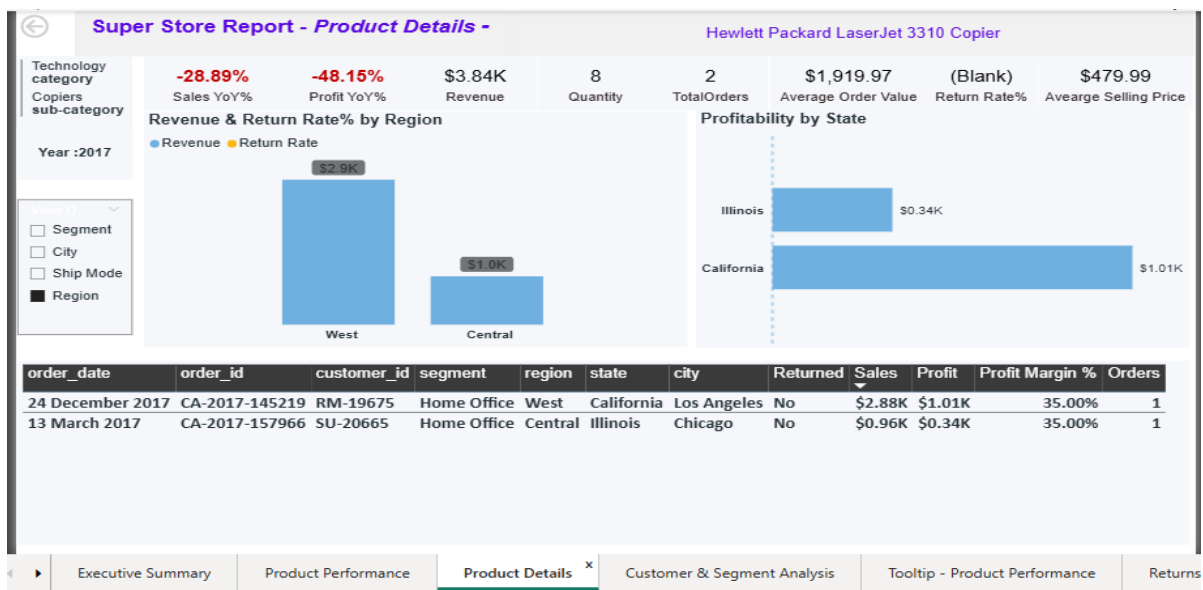

This page features KPI cards for Sales, products, orders, profitability, return rate and average order value, with year and segment slicers for interactive analysis. Created category level Sales & Profit analysis, identified top 5 and bottom 5 products based on profitability and built a region wise matrix displaying quantity and sales for detailed product comparison.
